Z-Suite

CAPABILITIES & ROADMAP / OCTOBER 27, 2026

Your crews. Your jobs. One connected working day.

Z-Suite brings field timekeeping, workforce scheduling, equipment records and jobsite documentation into connected Office and Field browser workspaces.

01

Plan the work

People, shifts & assets

02

Capture the day

Time, forms & evidence

03

Review & act

Approvals, reports & exports

A buyer's guide to the product today and the capabilities being planned.

Delivered capabilities and roadmap items are clearly separated.

CURRENT CAPABILITIES / 01

From clock-in to payroll handoff

Capture work against the right job, resolve exceptions and prepare reviewed time for your payroll process.

DELIVERED

Time capture & breaks

Give employees an online browser clock for their working day.

- Clock in and out; start and end breaks.
- Choose projects and cost codes, switch allocations and add notes.
- Present configured punch questions.

DELIVERED

Time cards & corrections

Let employees review their records and request changes.

- View personal period entries and hour summaries.
- Explicitly attest to the presented card.
- Submit correction requests and returned-card proposals for review.

DELIVERED

Office review & approval

Work through time entries with clear reviewer decisions.

- Filter entries and inspect supporting detail.
- Approve, return and bulk-approve time cards.
- Enter time on behalf of employees where authorized.

DELIVERED

Period readiness & close

See what needs attention before handing off payroll.

- Review readiness and blocking conditions.
- Narrow review by employee or crew.
- Lock, reopen and recalculate periods with the appropriate authority.

DELIVERED

Configurable pay rules

Maintain the rules used to prepare time.

- Weekly, biweekly, semimonthly and monthly schedules.
- Overtime, double-time and rounding settings.
- Daily allocation, trade classification and compensation history.

Configuration is not a labor-law or certified-payroll compliance guarantee.

DELIVERED

Payroll CSV & reporting

Preview and download mapped payroll handoff files.

- Configure export mappings and earning codes.
- Validate previews and inspect export history.
- Run time/activity reports and CSV exports.

Payroll export is whole-period. Z-Suite does not issue wages, make deposits or file payroll taxes.

Coordinate people and schedules

Connect employee records, planned work and attendance without confusing a scheduled shift with approved payroll time.

DELIVERED

Crew scheduling

Plan work in day, week and month calendars or an events list.

- Draft, assign, schedule, edit and archive events.
- Use notes, attachments and date filters.
- Create bounded daily or weekly recurrence.

DELIVERED

Assignments & attendance

Compare plans with recorded attendance.

- Handle assignment conflicts with explicit authorized overrides.
- Compare scheduled and clocked activity by project or crew.
- Identify unscheduled attendance.

Attendance comparison is not an approved-hours or payroll total.

DELIVERED

Employee self-service

Keep everyday employee actions close at hand.

- View published personal schedules and acknowledge shifts.
- Request whole-day or partial-day time off.
- Track requests through reviewer decisions and cancellation.

Shift swaps, bidding and a full leave-accrual builder are not included in this scope.

DELIVERED

Employee records

Maintain people and their employment context.

- Employee directory, profiles and employment history.
- Invitation issue, resend and revocation controls.
- Compensation revisions with restricted access.

Ending employment and suspending login access are separate actions.

DELIVERED

Crews, positions & roles

Organize responsibility and control access.

- Manage groups, memberships, positions and supervisors.
- Assign roles with self, crew, group or company scope.
- Inspect effective permission sources and workspace access.

DELIVERED

Projects & work coding

Give field records a consistent job context.

- Project catalog, hierarchy, search and named leads.
- Site/location context and project time-zone settings.
- Project-specific cost codes and time/activity history.

Job-level hours and expense visibility are not full job-cost accounting, estimating or budget control.

Keep equipment work connected

Maintain asset records, plan explicit bookings and retain the service and inspection evidence behind each piece of equipment.

DELIVERED

Asset registry & history

Use a dedicated Equipment workspace rather than disconnected asset lists.

- Search equipment and open detailed asset records.
- Track profiles, components, files and history.
- Review maintenance, defects, assignments and coverage in related tabs.
- Use registry and definition-file import/export tools.

DELIVERED

Maintenance & condition

Record the facts needed to understand service needs.

- Capture service and meter readings.
- Manage maintenance thresholds and opt-in recurrence.
- Review inspection and defect streams.
- Configure in-app due-date and expiry reminders.

Not a complete workshop purchasing, parts inventory or repair-invoicing suite.

DELIVERED

Requests, bookings & operators

Reserve individual assets over explicit time windows.

- Manage equipment requests and bookings.
- Review operator qualifications and training evidence.
- Associate assets with selected time entries or schedule shifts.
- Record custody and manual location.

No quantity booking, continuous GPS/telematics or automatic equipment usage costing is implied.

DELIVERED

Coverage & financial facts

Keep supporting asset information together.

- Maintain coverage, programs and obligation records.
- Link requirements and record applicability reviews.
- Retain acquisition, insured and market values or sale proceeds.
- Attach authorized files without duplicating the library original.

Values are reference facts, not depreciation, fixed-asset accounting or a general ledger. Applicability still requires human judgment.

Equipment access and actions are permission-controlled. An equipment refusal does not block labor capture or scheduling. Meter gaps remain unknown rather than being silently estimated.

Document safety and qualifications

Capture daily crew safety evidence, reuse job safety analyses and keep training records available to authorized reviewers.

DELIVERED

Daily crew JSA capture

Build a daily job safety analysis in the Field workspace.

- Record job details, steps, hazards and controls.
- Add sketches/photos and equipment checks.
- Capture crew/visitor sign-ins, gas readings, revisions and closure.

Office reporting and formatted JSA bundles have additional work planned; see roadmap.

DELIVERED

Reusable safety analyses

Create repeatable safety content with retained evidence.

- Maintain JSA libraries and templates.
- Scope requirements to projects and cost codes.
- Retain acknowledgements, signatures and earlier versions.

DELIVERED

Safety observations

Report issues and review their follow-up context.

- Field observation reporting and authorized Office review.
- Assign owners, revise evidence and transition records.
- Create a linked corrective action from an observation.

DELIVERED

Training & certifications

Maintain training materials, sessions and evidence-backed qualification history.

- Record completions, renewals and expiry.
- Review an informational requirements matrix.
- Protect credential numbers with separately authorized reveal.

Records do not issue external certifications or guarantee work eligibility.

DELIVERED · READ-ONLY SCOPE

Safety record visibility

Review recorded incidents, safety inspections, PPE verification and corrective-action details.

- Inspect recorded owners, findings, due dates and states.
- Follow supported evidence and requirement links.

These Office master views are read-only, not complete standalone intake, investigation or action-lifecycle workbenches.

SCOPE BOUNDARY

Evidence, not certification

Retain useful safety context without overstating what software can guarantee.

- Covered-document relationships are available to read.
- Access to sensitive records is separately controlled.

No regulatory filing service, legal sufficiency, OSHA approval or blanket safety/compliance certification is claimed.

Capture the jobsite record

Bring forms, daily reports, shared files and expense evidence into the same working context.

DELIVERED

Forms & submissions

Design structured templates and review completed submissions.

- Text, numbers, dates, choices and reference fields.
- Photo/file and signature fields.
- Personal submissions and authorized approve/reject review.
- Retained drafts and explicit retry for interrupted online work.

Saved device input is not an offline submission or a server receipt.

DELIVERED

Daily field reports

Create project/date reports from published templates in the Office workspace.

- Save drafts or submit answered reports.
- Review, finalize, reopen and re-finalize where authorized.
- Inspect coverage and generated documents.
- Use attachments and workspace exports.

DELIVERED

Photos & documents

Organize project files in one shared Files destination.

- Photo/document filters, grid/list views and batch uploads.
- Scan-aware previews and original downloads.
- File versions, activity, archive and restore.
- Expiring share links, revocation and access controls.

Availability depends on storage, scanning and deployment configuration; not CAD/BIM editing or automatic OCR.

DELIVERED

Expenses & per diem

Capture spending and prepare reimbursement handoffs.

- Mileage, travel, other expenses and optional receipts.
- Per-diem rate-table and day entry.
- Office decisions, allocations and grouped exports.
- Record payment confirmation and reversal evidence.

Confirmation records an external payment; Z-Suite does not transfer funds or issue reimbursements.

Support the office and the field

Shared communication, account controls and configuration help teams use the same records with appropriate access.

DELIVERED

Bulletin & acknowledgements

Target updates; request responses.

- Target company, project, crew, position or named employees.
- Use attachments and scheduled publication.
- Review read and acknowledgement counts.

Opening a post is not acknowledgement or proof of comprehension.

DELIVERED

Company & personal settings

Adapt the browser experience to your organization.

- Company identity, branding and regional formatting.
- English/Spanish interface language selection.
- Personal appearance and theme preferences.

Spanish help articles remain planned; language selection is not a claim of complete localization.

DELIVERED

Account & audit controls

Manage local account access and inspect authorized activity.

- Password changes, account recovery and session controls.
- Reasoned administrator account-state changes.
- Scoped, redacted audit browsing and event detail.

No enterprise SSO, MFA, SCIM or security certification is represented as delivered here.

DELIVERED · SETUP REQUIRED

FOUNDATION connection

Support inbound FOUNDATION record reconciliation.

- Test connections and rotate credentials.
- Review syncs, matching and conflicts.
- Employees, projects, cost codes and equipment.

External provisioning and validation required. Payroll handoff is CSV, not direct transmission.

DELIVERED

Help & notifications

Find readable guidance and configure communication channels.

- In-product English help with article browse/search.
- Notification preferences and provider setup controls.
- Email/SMS configuration and explicit test-send actions.

Provider accounts are required; delivery is not guaranteed. Conversational assistance is planned, not included today.

DELIVERED

Browser delivery model

Connected Office and Field workspaces.

- Permission-based access, not device restrictions.
- Retained unsent input where supported.
- Online completion and confirmation.

No native apps, offline browser punching, kiosk/PIN mode or guaranteed background sync.

What’s being developed and planned

Daily-JSA work is partially delivered and remains in review. Other themes are planned or dependent follow-ons, with no committed release dates.

IN DEVELOPMENT · PROGRAM IN REVIEW

Daily JSA review & reports

Extend delivered Field capture with Office review and reports.

- Daily-record review and managed corrections.
- Formatted PDF/print and monthly bundles.

Remaining scope is not delivered in this baseline.

PLANNED · DEPENDENT FOLLOW-ONS

Connected JSA context

Make daily safety context easier to reuse.

- Read-only JSA equipment checks on asset records.
- Suggested forecast and air-quality conditions with source/as-of context.

Depends on the JSA program. Provider decisions remain; manual condition entry already exists.

PLANNED · PLATFORM FOUNDATIONS

Native/offline foundations

Prepare future disconnected crew time and evidence contracts.

- Native sessions and conflict-recovery foundations.
- GPS/selfie evidence and Office exception review.

Not a mobile app or a commitment to build/distribute one in this work.

PLANNED

Guided help & Spanish articles

Extend existing readable help with conversational guidance and a Spanish article edition.

- Cited answers and permission-valid navigation suggestions.
- Spanish adaptation of existing English guides.

Guidance-only scope: no autonomous approvals, business-data queries or action execution.

PLANNED

Microsoft sign-in

Optional Microsoft 365 / Entra sign-in for eligible existing staff.

- Trusted identity matching and link lifecycle.
- Office/Field sign-in and account switching.

No directory sync, automatic user creation, Graph access or mandatory SSO is promised.

PLANNED

Read-only AI connections

Allow compatible AI clients to access a limited, permission-controlled read surface.

- OAuth consent and read-only MCP tools.
- Personal/admin connection visibility and revocation.

Client compatibility is specific, not universal. No write actions or general public API launch is included.

No release dates are committed. Planned items remain subject to owner prioritization, accepted design, dependencies and validation. Purchase decisions should be based on delivered capabilities—not future scope.

Choose on fit, not future promises

Use the current product in a demonstration of your own workflows, and make configuration and acceptance part of the buying conversation.

WORKFLOW FIT

A strong fit to evaluate

Teams seeking connected field and office operations.

- Job-coded time, review and payroll-file handoff.
- Crew schedules and employee records.
- Equipment, field documentation and safety evidence.

SCOPE BOUNDARY

Not a replacement for everything

Keep adjacent systems and obligations in view.

- No payroll disbursement or tax filing.
- No full accounting, estimating or budget/margin ledger.
- No native/offline app or regulatory certification claim.

DEMONSTRATION CHECKLIST

Ask to see your critical workflows

- Clock a shift, resolve a correction and approve a card.
- Preview your payroll mapping and export a period.
- Book an asset and review service evidence.
- Submit a form, inspect a JSA and open a project file.

Also test sign-in, role boundaries, storage/scanning and required external connections in the intended environment.

AVAILABILITY & EVIDENCE

How to read this guide

Delivered means implemented in the reviewed main-branch software baseline—not enabled in every installation.

- Baseline reviewed: October 27, 2026.
- Source reference: 559216ecafb0.
- Roadmap reconciled against current work plans, not historical wish lists.

This is a source-grounded capability guide, not exhaustive runtime, security, accessibility or production certification. Confirm commercial scope, configuration and support terms separately.

Next step: demonstrate the delivered workflows that matter to your team, confirm deployment and integration prerequisites, and agree the scope you are buying today.
